Etheria Is Watching Us

Flying discs seem to be behaving themselves lately, but if they show up again you will be glad to know that a San Diego group has them figured out.

The Journal has received a communication from the Borderland Sciences Research Associates, with an Adams Ave. address, and hastens to pass on the associates' conclusions to its readers.

Scientific investigators, they say, believe that the flying discs are in the nature of materializations, and that they come from a region called Etheria.

"This region or world is invisible to us, but it interpenetrates with ours," the explanation continues.

"The Etherians know all about us and send their craft into our world occasionally for purposes of observation.

"They control matter by thought-energy and their scientists think out the discs in etheric matter, and then are able to draw the atoms of our matter into the pattern, so as to fill it out and make it visible to us. The discs can dematerialize by a reverse process, and this explains the curious manner in which they disappear."

We find this more disturbing than helpful. If the researchers and associates in the Borderland Sciences can be believed, we are being spied upon in a very sneaky way.

What is the Un-American Activities Committee doing about this? What is Representative Nixon doing? What is Senator Hickenlooper doing? Come to think of it, just what IS Senator Hickenlooper doing?

The Etherians had better watch out, that's all.
